## List of Appendices

**Appendix A    Traffic Volume Data**

**Appendix B    Proposed Development Plan**

**Appendix C    SIDRA Results**

## 1. Introduction

Traffix Group has been engaged by Australian Tourism Investments No.5 Pty Ltd to undertake a traffic impact assessment and to prepare a report for the proposed residential development located at 6230-6280 Great Ocean Road in Apollo Bay.

This report provides a traffic engineering assessment of the proposal, with particular attention to traffic generation and impacts.

## 2. Existing Conditions

### 2.1. The Site

The subject site is located on the northwest side of Great Ocean Road north of the main township in Apollo Bay as shown in the locality plan at Figure 1 below.

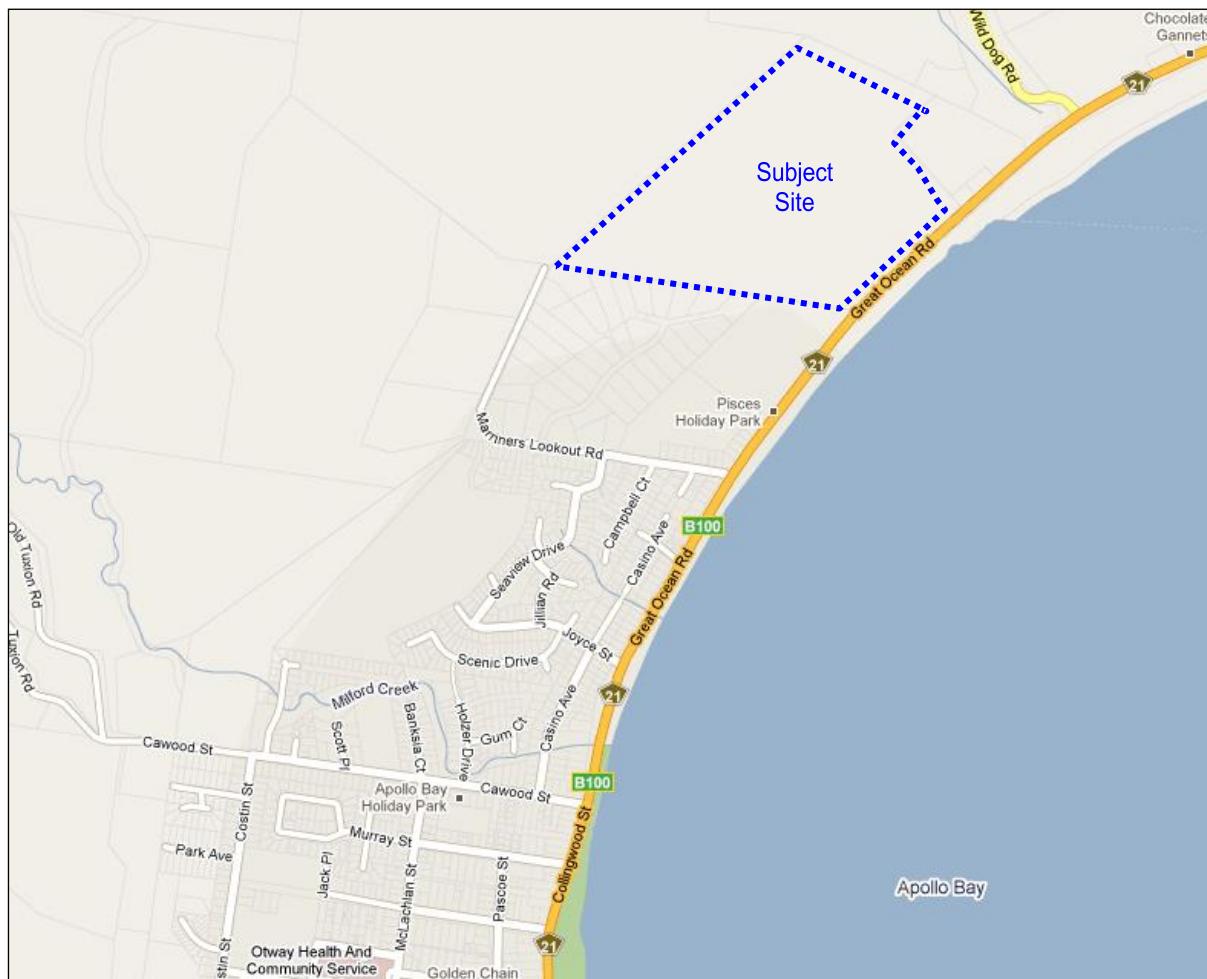

Figure 1: Locality Map

# Traffic Engineering Assessment

6280 Great Ocean Road, Apollo Bay

The subject site covers an area of approximately 41 hectares and has a frontage to Great Ocean Road. The site is currently occupied by a dwelling and associated outbuildings, with two access driveways to Great Ocean Road. An aerial view of the site and the existing access are shown in Figure 2 and Figure 3 respectively.

Figure 2: Aerial View

Figure 3: Subject Site (Existing Access) Viewed from Great Ocean Road

# Traffic Engineering Assessment

6280 Great Ocean Road, Apollo Bay

The subject site is located within two zones, a Neighbourhood Residential Zone – Schedule 1 (NRZ1) and a Rural Conservation Zone (RCZ) as shown in Figure 4 below. The site is also affected by the following overlays:

- Environmental Management Overlay – Schedule 1 (EMO1),
- Design and Development Overlay – Schedule 10 (DDO10)
- Development Plan Overlay – Schedule 5 (DPO5), and
- Significant Landscape Overlay – Schedules 3 and 5 (SLO3 and SLO5).

Surrounding uses to the north, north-east and west are predominantly rural. Pisces Holiday Park is located adjacent to the site to the south, and the main Apollo Bay Township is located further south. The foreshore is located opposite the site, southeast of Great Ocean Road.

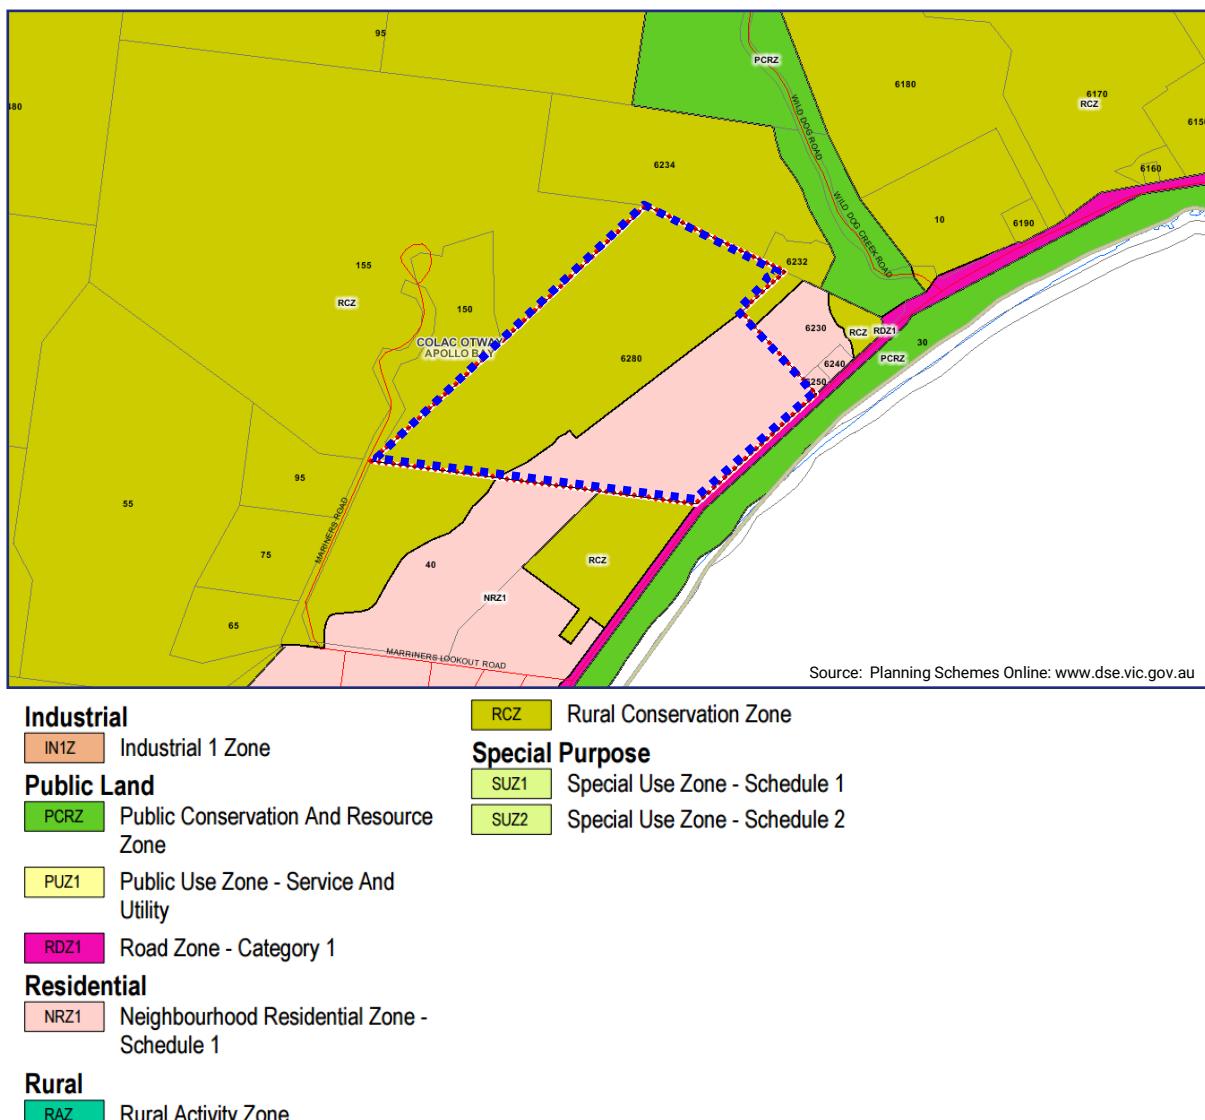

Figure 4: Land Use Zoning Map

## 2.2. Road Network

**Great Ocean Road** is an arterial road (Road Zone – Category 1) which follows the southern coast of Victoria west from Torquay.

In the vicinity of the subject site, Great Ocean Road is constructed with a 7.5 metre (approx.) carriageway within a 21.5 metre road reservation, and carries one through traffic lane in each direction.

The speed limit on Great Ocean Road past the site is 80km/h, and reduces to 60km/h to the southeast of the site, just north of the main entrance to the Pisces Holiday Park.

Figures 5 and 6 show Great Ocean Road in the vicinity of the site.

Figure 5: Great Ocean Road Looking Southwest Towards Apollo Bay from Existing Access

Figure 6: Great Ocean Road Looking Northeast Towards Apollo Bay from Existing Access

## 2.3. Road Volumes

Traffix Group undertook a seven-day tube count for the week of Thursday 12<sup>th</sup> April, 2018 to Wednesday 18<sup>th</sup> April, 2018 to collect traffic volume data on Great Ocean Road in the vicinity of the site.

These dates were chosen to enable the collection of holiday weekday, holiday weekend, and normal weekday volumes. This data (two-way volumes) is summarised in Table 1 below.

# Traffic Engineering Assessment

6280 Great Ocean Road, Apollo Bay

Table 1: Great Ocean Road Traffic Count Data (Two-Way) – 12-18 April, 2018

	Holiday Weekday		Holiday Weekend		Normal Weekday		
	Thursday	Friday	Saturday	Sunday	Monday	Tuesday	Wednesday
<b>AM Peak Vol</b>	333 vph	303 vph	354 vph	383 vph	266 vph	277 vph	284 vph
<b>AM Peak Hour</b>	10-11am	10-11am	10-11am	11am-12pm	11am-12pm	11am-12pm	10-11am
<b>PM Peak Vol</b>	373 vph	391 vph	330 vph	384 vph	317 vph	313 vph	330 vph
<b>PM Peak Hour</b>	3-4pm	12-1pm	3-4pm	12-1pm	12-1pm	12-1pm	3-4pm
<b>24 Hour Volume</b>	3,538 vpd	3,871 vpd	3,200 vpd	3,200 vpd	2,911 vpd	3,027 vpd	3,255 vph

We note that Department of Transport open data portal does not identify any growth on the Great Ocean Road and accordingly, the above information is considered to be representative of current volumes.

A copy of the detailed traffic volume data is attached at Appendix A.

A turning movement count was commissioned in 2010 at the Princes Caravan Park to determine the directional splits for traffic entering and exiting a similar site. This information is presented at Figure 8 below.

The surveyed peak hour turning movements are shown in Figure 7 below.

# Traffic Engineering Assessment

6280 Great Ocean Road, Apollo Bay

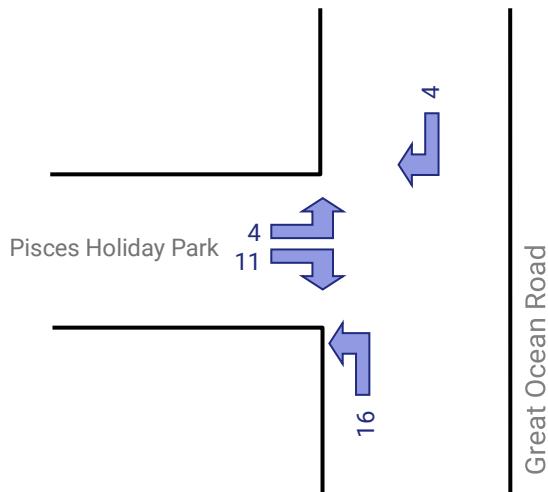

Figure 7: Peak Hour Turning Movements - Great Ocean Road/Pisces Holiday Park Intersection

## 2.4. Public Transport

Apollo Bay is connected via V/Line coach to Warrnambool and Geelong via the Great Ocean Road. The nearest bus stop is located within walking distance of the site, north of the Pisces Holiday Park entrance.

Figure 8 below shows the public transport network in the vicinity of the subject site.

# Traffic Engineering Assessment

6280 Great Ocean Road, Apollo Bay

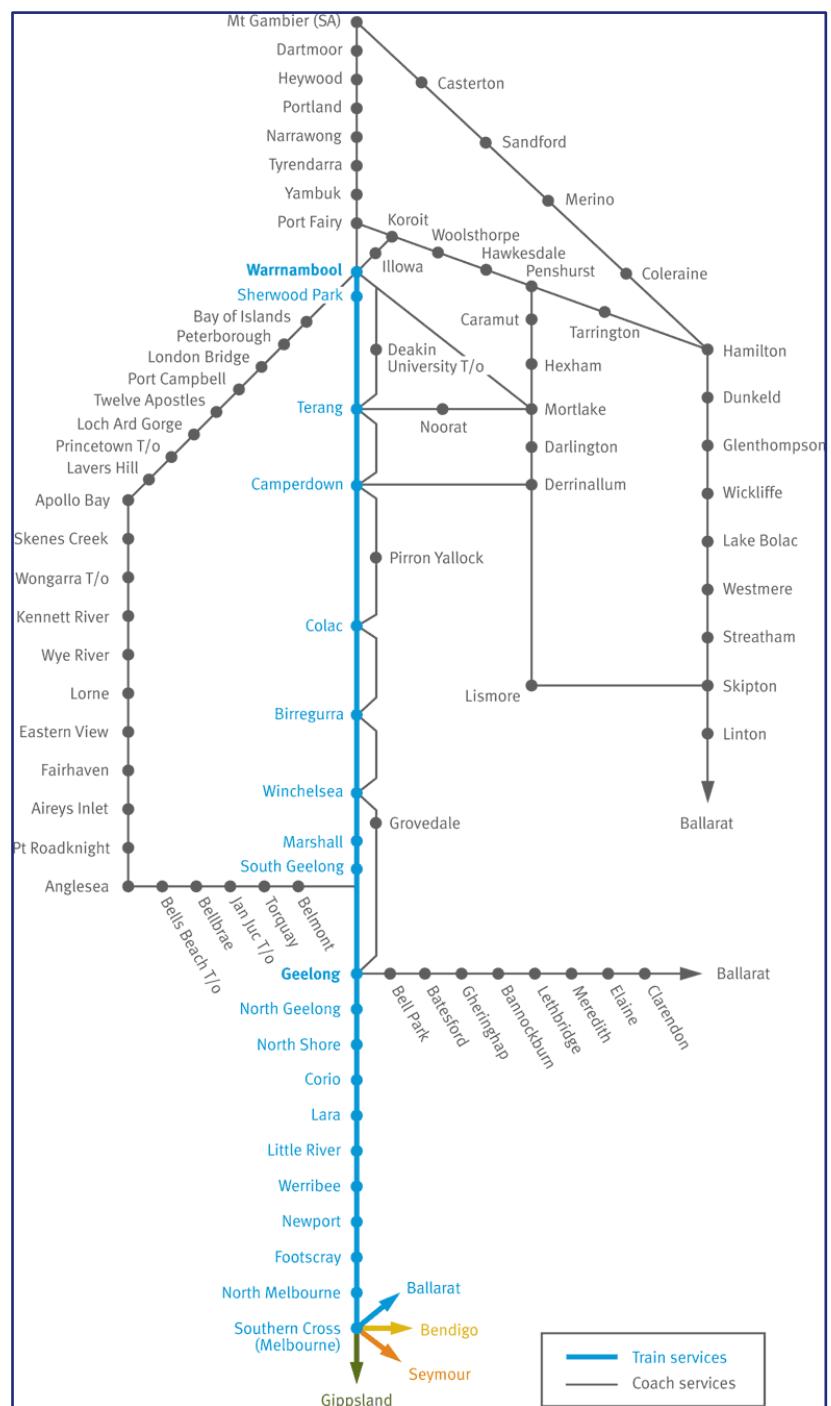

Figure 8: Public Transport Map

## 2.5. Crash Statistics

A review of the State Road Accident Records has been undertaken in the vicinity of the subject site, for the 5 years of available data from 1<sup>st</sup> January 2014 to 31<sup>st</sup> December 2018.

# Traffic Engineering Assessment

6280 Great Ocean Road, Apollo Bay

The area reviewed included Great Ocean Road between Wild Dog Creek Road and Marriners Lookout Road.

The review area included the Great Ocean Road/Wild Dog Creek Road and Great Ocean Road/Marriners Lookout Road intersections, as well as the Pisces Holiday Park access point.

A total of one (1) casualty crash was recorded during the 5-year period from 1<sup>st</sup> January 2014 to 31<sup>st</sup> December 2018. The crash information is summarised in Table 2 below.

Table 2: Crash History Data Summary<sup>(1)</sup>

Location	Crash Type	Date	Time	Severity	Road
Great Ocean Road 33m Southwest of Wild Dog Road.	173 – Left Off Carriageway into Object/Parked Vehicle	Wednesday 05/08/2015	11:00pm	Other Injury	Dark, Wet, Raining

Note (1): Casualty crash data is contained in the VicRoads' Arcgis Internet Database and includes all reported casualty crashes (i.e. injury crashes), which are classified into Fatal Injury, Serious Injury and Other Injury (i.e. minor injury) crashes. Property damage only or non-injury crashes are not included in the database.

We note that this accident occurred some 330 metres north of the site boundary and does not suggest any safety issues at the site in the area generally.

## **3. Proposal**

The proposal is to develop the site for the purposes of a residential subdivision comprising in the order of 144 dwellings.

Access to the site is proposed via a new road off Great Ocean Road. Connecting roads will also pass through the adjacent land to the south.

A copy of the indicative overall development concept plan prepared by Beveridge Williams (dated October, 2019) is attached at Appendix B.

## **4. Traffic Assessments**

### **4.1. Apollo Bay Settlement**

The 2011 ABS Census data for the Colac Otway Shire indicates that on the census day there were 7,856 occupied private dwellings within the Shire out of a total of 11,259 dwellings overall, which equates to 71% of dwellings within the Shire being occupied. This is considerably less than the Victorian average of approximately 90%.

Furthermore, this is the average across all townships within the Colac Otway Shire and includes settlements with a much higher proportion of permanent residents compared with Apollo Bay.

Notably, Clause 21.01-04 of the Colac Otway Planning Scheme sets out the settlement patterns within the Shire, and includes the following statement:

*The Shire contains two major urban centres – Colac with a relatively stable population of around 12,000 and Apollo Bay whose permanent population of some 1,000 is completely overshadowed by its summer population of approximately 10,000. [Apollo Bay's] economy is primarily founded on tourism with some limited employment in fishing and boating activities.*

Having regard to the above, it is likely that a considerable proportion of the dwellings constructed on the subject site will be unoccupied outside of tourist seasons, and that the traffic generation characteristics will be different from standard metropolitan residential subdivisions.

### **4.2. Traffic Generation**

The subdivision comprises 144 lots which make use of the road network.

We note that Traffix Group has undertaken a number of traffic generation studies in regional areas throughout Victoria, including Torquay, and have found that a rate of 7 trips per dwelling to be typical in these areas. For the purposes of a conservative assessment we have adopted a rate of 8 trips per lot per day for this subdivision.

Having regard to the nature of Apollo Bay, it is likely that a portion of the dwellings will be utilised for holiday accommodation as opposed to a permanent residence. This is expected to comprise 50% of the lots. Surveys conducted by Traffix Group, as outlined in our previous report (Reference Number 12385R7148), indicate that the holiday traffic distribution is likely to be 16% in the Lorne direction and 84% towards Apollo Bay town centre. The remaining 50% is

anticipated to be permanent residents with an equal distribution in each direction along the Great Ocean Road. This results in an overall traffic distribution of 67% to the southwest and 33% to the northeast.

Significantly, the revised application which comprises 144 lots represents a reduction from the previous application considered at VCAT which had 158 lots.

Accordingly, there is a reduction in the number of traffic movements expected to be generated by the development and there will be no adverse traffic impacts to the road network when compared with the previous application.

## 4.3. Traffic Distribution

This assessment conservatively assumes that all traffic both Lorne bound and Apollo Bay bound will use the single main access off Great Ocean Road.

Table 3 below outlines the number of trips the development is expected to generate and the direction of travel.

Table 3: Traffic Distribution

Access Points	Lorne Bound	Apollo Bay Bound	Total Trips
Great Ocean Road	380	772	1,152

Figure 9 below indicates the estimated peak hour<sup>1</sup> turning movements to and from the proposed residential development for the surveyed time of 11:30am – 12:30pm, based on the surveyed distribution of 43% exiting and 57% entering.

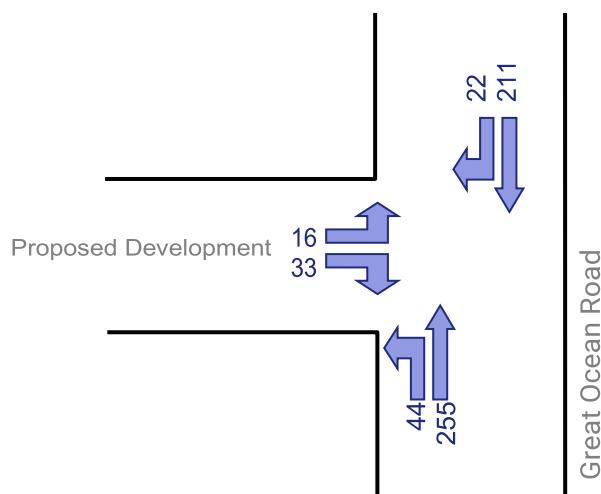

Figure 9: Estimated Peak Hour Turning Movements, 11:30am - 12:30pm Sunday

<sup>1</sup> The estimated figures assume that the peak site traffic generation period coincides with the peak Great Ocean Road traffic.

#### **4.4. SIDRA Analysis**

A SIDRA intersection analysis has been undertaken to determine the performance of the Great Ocean Road/Site Access Road intersection under post development conditions. A peak flow factor of 95% has been adopted.

A comparison of pre- and post-development intersection operation is presented Table 4.

*Table 4: Degree of Saturation*

<b>Approach</b>	<b>Degree of Saturation Pre-Development</b>	<b>Degree of Saturation Post-Development</b>
Great Ocean Road – Northeast Approach	0.116	0.142
Great Ocean Road – Southwest Approach	0.140	0.169
Site Access Road – Northwest Approach	N/A	0.088

The SIDRA analysis indicates that there will be negligible impact on the operation of Great Ocean Road as a result of the proposed development.

Significantly, Degrees of Saturation (DOS) less than 0.8 are considered to be good operating conditions for unsignalised intersections. As can be seen each DOS (being the highest DOS of any one approach at that intersection) is significantly lower than 0.8. Table 4 indicates there is ample capacity on each approach to easily accommodate traffic generated by the site.

Full outputs of the SIDRA analysis for existing and post development conditions are attached at Appendix C.

#### **4.5. Traffic Impact**

Based on the above assessments, we are satisfied that there will be no adverse impacts on Great Ocean Road as a result of the proposed development. Furthermore, the development can be adequately serviced by a single new access point from Great Ocean Road.

## **4.6. Road Cross-Sections**

Colac Otway Shire Council has adopted the Infrastructure Design Manual (IDM), which provides dimensions for all road types depending on the expected level of use.

An 'Access Place' is defined in Clause 56.06-8 of the Planning Scheme as ... 'a minor street providing local residential access with shared traffic, pedestrian and recreation use, but with pedestrian priority'. An Access Place has a target traffic volume up to 300 vehicles per day.

An 'Access Street' is defined in Clause 56.06-8 of the Planning Scheme as ... 'a street providing local residential access where traffic is subservient, speed and volume are low and pedestrian and bicycle movements are facilitated'. An Access Street has a target traffic volume of 1,000 to 2,500 vehicles per day.

All of the proposed roads within the subdivision will be classified as either Access Places or Access Streets.

The IDM sets out that an Access Place be provided with a 6.0 metre wide carriageway which permits parking on one side of the road. A minimum verge width of 3.5 metres is required on each side which includes the provision of footpaths on both sides of the road.

The IDM sets out that an Access Street be provided with a 7.3 metre wide carriageway which permits parking on both sides of the road. A minimum verge width of 3.5 metres is required on each side which includes the provision of footpaths on both sides of the road.

## **4.7. Access for Emergency and Service Vehicles**

We note that the internal road layout includes some dead-end streets.

Any such streets will need to accommodate Council's refuse vehicle and ensure that emergency and other service vehicles can also access the development.

Figure 10 below shows the CFA's minimum requirements for turning a truck around by undertaking a three-point turn within a 5.5 metre road carriageway, as set out in the CFA 'Requirements for Water Supplies and Access for Subdivisions in Residential 1 and 2 and Township Zones' document (dated 9th October, 2006).

# Traffic Engineering Assessment

6280 Great Ocean Road, Apollo Bay

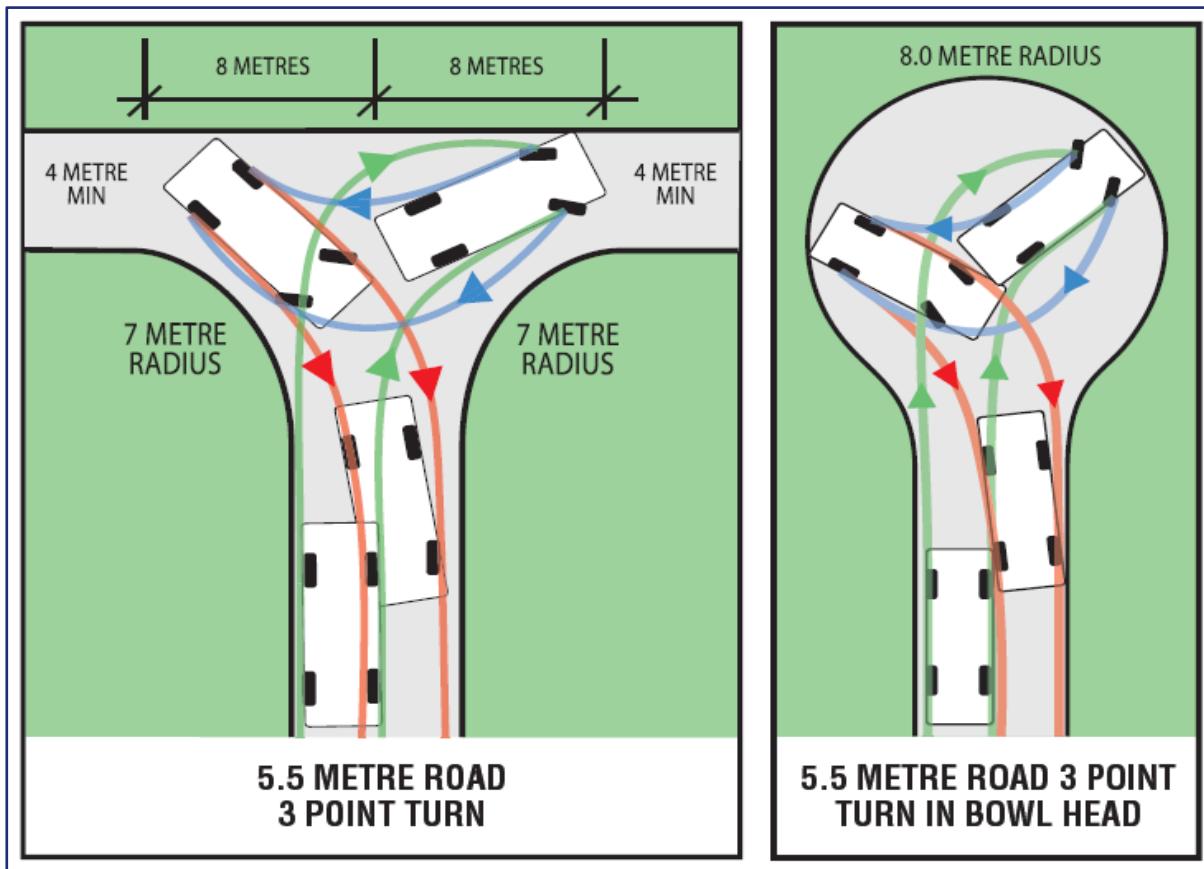

Figure 10: CFA Turning Requirements at Dead-Ends

## **5. Conclusions**

Having inspected the subject site and surrounding area, collected traffic data and undertaken various traffic engineering assessments, we are of the opinion that:

- a) Apollo Bay has a very seasonal population due to its popularity as a tourist destination, and accordingly the traffic generation and distribution characteristics for the proposed development are likely to be different to a standard residential subdivision in a metropolitan area,
- b) the development of 144 dwellings may generate in the order of up to 1,152 vehicle trip-ends per day during the peak season and substantially less at other times,
- c) traffic impacts will be less for this development as the number of dwellings represents a reduction when compared with previous applications on this site,
- d) the development can be adequately serviced via a single new access intersection to Great Ocean Road,
- e) there will not be any adverse impacts on Great Ocean Road as a result of the proposed development,
- f) all roads within the proposed development should be designed in accordance with the Access Place and Access Street requirements set out in Council's IDM,
- g) no lots should take direct access to Great Ocean Road,
- h) any dead-end roads that are longer than 60 metres should be designed to accommodate the manoeuvring requirements of service and emergency vehicles as set out in the IDM,
- i) the recommendations in e) and g) above meet the CFA's requirements for access within subdivisions,
- j) as was the case for the previous applications on this site, Department of Transport is likely to require deceleration lanes into the development from Great Ocean Road and we recommend that they be provided in accordance with the Austroads Guidelines,
- k) subject to the above recommendations, there are no traffic engineering reasons why the development plan for 6280 Great Ocean Road, Apollo Bay should not be approved.

# Appendix B

## Proposed Development Plan

LEGEND	
	Site boundary
	Internal title boundaries
	Existing contours (1m interval)
	40m contour
	Neighbourhood residential zone boundary as provided by DELWP
	Existing shoreline walking trail
	Road reserve
	Main pedestrian circulation
	Drainage reserve
	Tree reserve/ Landscape buffer
	Open space reserve
	Lots
	Building exclusion zone (above 40m contour)
	Fire buffer (defendable space to forest)
	Fire buffer (defendable space to grassland)
	Road connections to adjacent land
	Proposed entrance point from Great Ocean Road
	Land subject to inundation (year 2100 1 in 100 ARI event)
	Indicative landslip protection measures
	Indicative landslip debris channel flow breakers

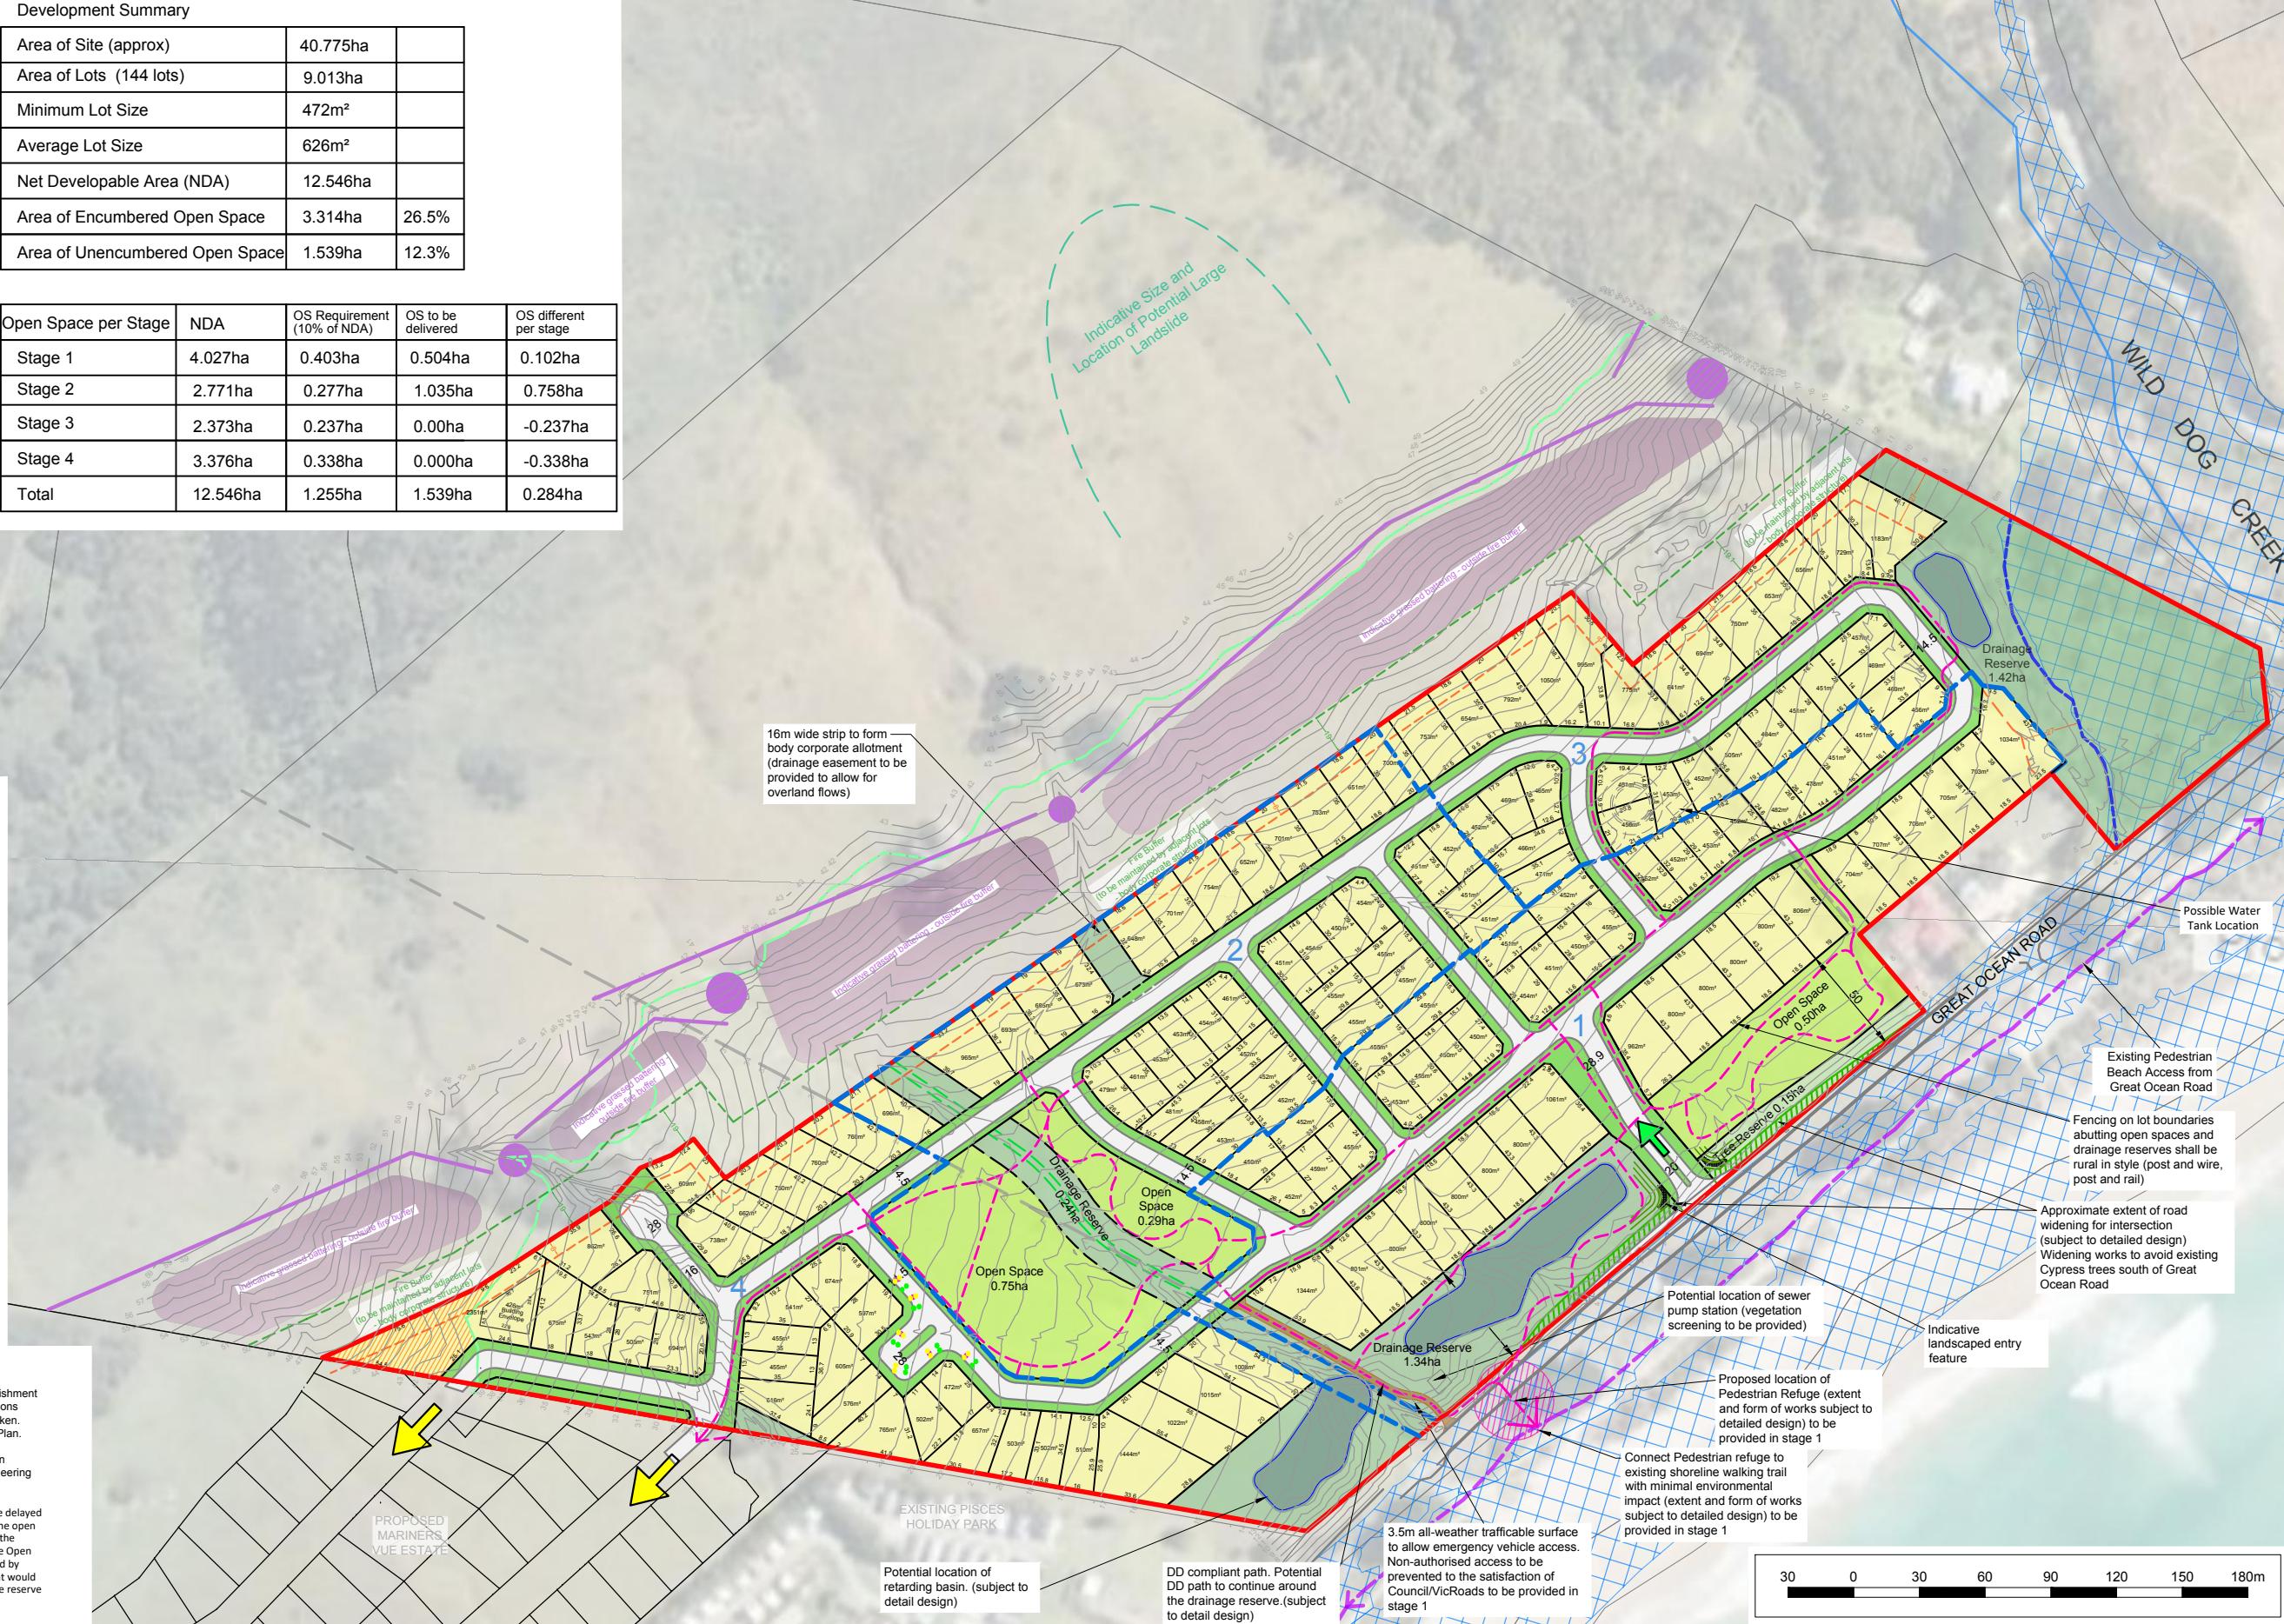

Typical Section - Local Access Street (NTS)  
Adjacent to Open Space (NTS)

Typical Section - Local Access Street (NTS)

- Notes:
- This plan is subject to council approval
  - All roads are 16m in width unless noted otherwise
  - Title boundaries are approximate only and subject to title re-establishment
  - All dimensions and areas are subject to survey and final computations
  - The majority of the Aboriginal Archaeology work has been undertaken. Additional work is required prior to finalising the Cultural Heritage Plan.
  - Access/egress to the site is subject to Council / VicRoads approval
  - Access/egress to the site is subject to Council / VicRoads approval
  - Road pavement is indicated only and subject to engineering design
  - Drainage areas are approximate only and subject to detailed engineering design
  - Contour interval 1m
  - "To assuage Council's concerns that the remaining Open Space may be delayed by the long-term leasehold that exists on the land on which much of the open space is situated, the developer will provide a signed agreement with the Leasholder of the land, allowing the developer to locate and build the Open Space and any required associated infrastructure, if and when required by Council (in this case, with Stage 2 of the development). The Agreement would also allow for the subdivision of the land and the transfer of title of the reserve to Council."

Site Level of Service (LOS) Method: Delay (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).

Vehicle movement LOS values are based on average delay per movement.

Minor Road Approach LOS values are based on average delay for all vehicle movements.

NA: Intersection LOS and Major Road Approach LOS values are Not Applicable for two-way sign control since the average delay is not a good LOS measure due to zero delays associated with major road movements.

SIDRA Standard Delay Model is used. Control Delay includes Geometric Delay.

Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).

HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.
